All the documents and attached files are now in FDMS except for the three TSD documents (TX187-0004, 0005, and 0006). Let me know when the TSDs are ready to upload to FDMS.

The 481 Luminant attachments are in one document (TX187-0030).

For the documents without attachments, I have downloaded the files to the H directory with the respective uploaded files.

I always do this as a check that I uploaded the correct file by checking that they are exactly the same size. Check as you see fit in the H directory

If you want to check the documents with attached files, I (or Carl ??) will log you in and let you check and edit the documents as you see fit.

I was very careful uploading the files but could have made some mistakes. I CAN replace (and delete, I think) attached files and I can add attached files.

Per your comment Friday about file dates, the very last file is an attached file I saved from Regulations.gov to see if the downloaded file has the original file

date or the date downloaded. Note the file has Friday's date.

Contact me if you have any questions. I plan to be in the office Monday after about 10:30. Bill,  
x7253

Attached are the msg, csv, and ZIP files I could not upload as FDMS document attachments and the respective replacement files.

In each case I added "-csv file" or "-mes file" or "-ZIP file" to the end of the pdf replacement file name. I felt that this would give the reader the original file type.

Let me know if you have a problem with this. I can easily remove the "-csv file", etc., from the file names in FDMS.

Below are the only non-FDMS file type files. Most of these are the attached file above.

For TX187-0013-0018, I uploaded the first pdf file to show the csv file type in the title
